11mm Wide-Angle Lenses for JVC 3D Camcorders GS-TD1 & GY-HMZ1U ProHD

**Expand the potential of your
3D camcorder!**

The Cyclopital3D Wide-angle lens allows you to vary your techniques by extending the field of view (FOV) to 117 degrees. This lens could be considered a “fish-eye” type lens.

In addition to the obvious advantage of getting more in the scene, you can also get a little closer to your subject when “infinity” is in the background while maintain the same amount of parallax in the scene.

Features and Benefits:

- Extends the field of view (FOV) to 117 degrees
- Easily attaches to the tripod mount of the camcorder
- Capture great fish-eye images

Tips for use:

- You don't have to limit yourself to the widest FOV when shooting. The benefit of the wide-angle lens is that it gives you more "range," so you can zoom to "normal" or even longer if that's what works for the shot. Of course, zooming too far can cause "card-boarding" in your image if you don't widen the stereo base of the camera.

Warranty

Your adapter comes with a Limited Warranty against defects in workmanship and materials for 30 days from the date of purchase. The limited warranty does not apply if the product has been damaged by accident, mishandling, misuse, abuse, or alteration.
